

**A SOFTWARE SOLUTION  
DEDICATED TO MACHINES  
AND EQUIPMENT BUILDERS**

## A DIGITAL heart for your machines

Monitoring of all plants from a single app

Real-time notifications on smartphones and tablets

Check the correct use of machines and equipment

Offer to your customer added value service

## We can speak the language of your systems

We are able to integrate with electromechanical systems, sensor networks, IoT devices and latest generation technologies, including industrial Ethernet PLC, SCADA systems,, gateways, OPC Server, PLC, Modbus, MT Connect, CODESYS, Siemens S7, FOCAS.

## Beneficial for suppliers...

It is possible to verify the correct use of your own products, based on the expected operating conditions, propose maintenance programs based on real use, offer value-added services for the customer, in particular to ensure business continuity.

## ... and for customers.

The customer can obtain reliable information on the progress of the process, production, stops and micro-stops, performance indicators and useful elements for identifying improvement actions through a single interface.

Real time monitoring  
and control

Performance analysis  
and KPI (OEE)

Alarms and Critical  
Alerts notification

Machines and  
sensors integration

Quality  
checks

Process  
traceability
